Born in France, graduated in surgery from the Faculty of Medicine in Paris in 1970. He was head of plastic surgery at the Gustave-Roussy Cancer Institute (Villejuif) (1977-1994) where he was in charge plastic surgery, with special responsibility for the breast and an interest skin complications of skin tumours after radiotherapy. He is Director of the plastic surgery department at the European Institute of Oncology since 1994.

His main clinical interest is breast reconstruction. He has published more than 150 papers and book chapters, and a book on Curative and Reconstructive Breast Surgery (1991 revised 1997). Dr Petit has also been involved for many years in the training of plastic and cancer surgeons and more than 15 years ago developed a teaching course involving direct video-transmission of operations, which is now part of the ESO programme. His research interests include the development of techniques to improve quality of life of cancer patients and demonstration of the usefulness of plastic surgery to increase the radicality of tumour resection without increasing mutilation. His last clinical research is focussed on the nipple sparing mastectomy in patients requiring a mastectomy, and on the role of lipofilling in breast reconstructive surgery, especially the safety in breast cancer patients.
